

Blue Limit launches shrimp larvae feed Brilliant Blue in Asia

Press Release, 5 March 2008

The Norwegian Aquaculture Feed Company Blue Limit AS today presented the unique new Patent Applied Shrimp Larvae Feed Brilliant Blue, for an international Aquaculture Feed, Ingredient and Aquaculture Farming Audience at VICTAM ASIA 2008 in Bangkok, Thailand. Turn-out was considerable and there was a significant interest from all ranges of the industry.

Man.Dir. Dr. Anders Aksnes has stated that “Blue Limit AS intends to replace Artemia in Shrimp Hatcheries and wherever else our feed can be useful and demonstrate the required nutritional value also with our next generation Shrimp Larvae Feed – Brilliant Glory . Brilliant Blue clearly has a place in the early stage Shrimp Larvae feed arena as a specially formulated early stage Shrimp Larvae Supplement Feed. The new video of Shrimp Larvae (Post Larvae 2) feeding on Brilliant Blue (Grade B) demonstrates we have a feed that does not adsorb and does not foul the water. Together with the studies on survival, growth, leakage and dispersion these results show that Brilliant Blue has unique properties. The reception at VICTAM ASIA 2008 supports this view”.

Blue Limit is a spin-out from Fiskeriforskning Bergen/Nofima, financed by Sarsia Seed AS and Sarsia Innovation AS from Bergen, Norway, as well as Innovation Norway.
