

Sarsia Seed invests in Blue Limit AS

Blue Limit AS develops, protects, produces and sells early stage [larvae feed](#) for shrimp and mollusks. The company was established in August 2006 by researchers from [Fiskeriforskning](#) in Bergen, Norway and Sarsia Innovation AS. Blue Limit AS is currently in the verification (application development and documentation) phase for an industrially formulated feed for early stage shrimp larvae (Mysis and Post Larvae). The company intends to expand this in to later stage feed and also to new species as soon as the first product is in the market.
